

Grease Recycling/Rendering and Grease Trap and Grease Interceptor Service Providers

Grease is the number one cause of sewer line blockages. Grease from restaurants and other food service establishments clogs the lines and blows the flow, causing backups and sewer spills. These spills can enter the storm drain and pollute the ocean, causing beach closures.

Renderers are companies that collect Fats, Oil, and Grease (FOG) from food service establishments. The renderer then properly recycles or disposes of the grease.

The two most common products rendered from a food service facility are yellow grease and brown grease.

- Yellow grease: from bulk deep fat frying operations and oil/water separator units.
- Brown grease: from grease traps and grease interceptor waste.

The following is a listing of businesses that provide rendering services. Please note that the City of Huntington Beach does not endorse the following contractors and their services:

Baker Commodities

4020 Bandini Blvd.
Los Angeles, CA 90023
(800) 427-0696
